

## Innovation

### **1. Previous 5 Recent Searches Saved**

- The last five searches are listed on the homepage. These searches show as clickable chips under the search bar. The user can click one of these chips to quickly repeat a previous search.
- Because the list is stored locally using Capacitor storage, the list is retained even after the user closes and reopens the programme.

### **2. Improved/Modern User Interface**

The home page and recipe details page were redesigned for a cleaner and more contemporary look:

- A easy to use search bar with a clean look and prompt for entering ingredients.
- More aesthetically pleasing card sections for search results.
- To improve readability, separate card sections for ‘recipe Details page’ separating Title/Image, Ingredients.
- Ingredient images are displayed beside ingredients using Spoonacular’s ingredient image CDN.
- Better typography and spacing to make headings and sections stand out.

### **3. Better UX Feedback**

- A spinner and on screen messages are used to display loading and error states.
- When searches return no recipes, “No results” messages are displayed.
